These were dartived from expressed sequence tase (SSTs) foresting not interest. They can be used in disproacting (SSTs) focusing an empoping, identification of mutation, to assess blodivezity and for nutritional purposes. The present sequence is a cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            295 ATGCCTGCCTTCAATAGATTGCCCCTGGCTTCTCTCGTGCTTATCTACTGGGTCAGT 354

                                                                                                                                                                                                                                                                                                                             The present sequence is given in the olism of a specification relating to a novel family of heta sub-unit protestis from a voltage-gated sodium channel; hamm and rat bette sub-units, which have been collectively identified as beta; have been isolated. The polymoleocides and polypeptides are useful for exceeding for agonistic and antegonists of sodium channels. The agonistic and antegonists of sodium channels. The agonistic and successing associated with voltage-gated sodium channels, e.g. pain, epilepsy, strock, isothermia, heart Glessee, cookeen gyndrome, Remliai Nondromeffin Paragangliama, Phenylecomiza and Charcom Remliai.
                                                                                                                 Novel nucleic acids encoding a beta-3 subunit from a voltage-gated sedium channel, and their corresponding polypeptides, usefull for sedium treating sodium channel-associated conditions, e.g., pain, defecting and treating sodium channel-associated conditions, e.g., pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               363 AIGCCIGCCTICAACAGAINGCTICCCCTAGCTICTCTAGTGCTCATCTACTGGGTCAGA

This protein is involved in the generation of pain and other sensory or protein the paralleles in the generation of pain and endurance of mood, neutrodegenerative and sleep disorders, and in the control of mustle contraction, including any elegated paints as the term thear, dispession and vessular cone; The equinoses can be used in predictive medicine, screening and dispositio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the process and coding sequences of the rat scaling chains chain process and coding sequences of the procession of pain and chain chainsoy or procession is impulses. In the generation of pain and other sensory or preceptive merve impulses, in the establishment and endurance of mood, neurodeseneative and sleep discovers and an the control of muces contraction, including movements such as the heartbeat, dispession and vascular tone. The sequences can be used in predictive medicine, screening and diagnostic assays, and in pharmacoganomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New rat sodium channel beta-3 subunit gene isolated from a rat dorsal root agaglion cuba library for use in chromesome mapping, forensic medicine, monitoring clinical trials and therapeutics -

This sequence represents an expressed sequence teq (BEY) and is a polymuclectide of the invention are polymuclectides of the invention are polymuclectides of the invention are all secreted SEY sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to such the preventing or continties with would make them suitable for treating preventing or anellocating medical conditions in humans and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of the rat sodium channel bera3 protein (designated Alras946. This protein is involved in the generation of pain and other sensory or perceptive nerve inpulses, in the sexabilishment and enharance of mod, matrodepeneative and site persent so and site are are archaer, degestion and vascular content, including movements such as the heartbaer, degestion and vascular cone. The sequences can be used in predictive medicine, screening and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 Arccriccricalcadaliscricccriacricricitaticalcarcriacricalcada 60

Bris procekn i sinvolved in the generation of pain and other sensory or perceptive nerve impulses, in the establishment and endurance of mod, neurodegenesative and allege disorders, and in the control of muscle contraction, including movements such as the heartheat, dispession and vascular room. The sequences can be used in predictive medicine, screening and dispussic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present invention provides the protein and coding sequences of the

The invention relates to an isolated nucleic acid molecule (mutDNA), that encodes a mutant mammalian beta-1 subunit (SCNIB) of a voltage-gated sodium channel, where a mutation event has occurred, which disrupts the functioning of an assemble sodium channel, to produce an apilepsy phenoxype. The mutation does not result in a Cl21% substitution in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred, No. is the number of results predicted by chance to have a
core greater than or equal to the score of the result being printed,
and is derived by analysis of the cotal score distribution.
